Dear _____,

It is time for your annual Thermogram.

When we follow-up and take the second or third or fourth Thermogram (remember, there is no radiation, so no danger), and then take a second and third look at the areas in question, we can see how the body is responding. Is the body reacting as if it is preparing to go into cancer mode? Or, have there been improvements? Or, is it stable and not changing?

Perhaps, you have been doing the work necessary and your cancer risk is going down. By comparing previous Thermograms, we can clearly see what has or has not been happening since the last scan.

Regardless, thermography SAFELY reveals the trend.

You may now book your appointment on our website: _____. Or by calling the office at _____.

I look forward to seeing you again,
